

Cleaner
Means More
Efficient

Dustcontrol[®]

A truly extensive product range

Our catalogues present all our standard products mobile and stationary as well as our full range of accessories.

Dustcontrol offers a very wide range of products and accessories. This means that you can use our standard products to build up a solution that exactly matches the requirements of your business. It also means that you can select the accessories you need to extend the scope of your extraction equipment. For example, you can always connect cleaning equipment to our source extraction installations.

Tailor-made and flexible

Dustcontrol has stationary systems for when you need to remove dust and particles from fixed work-places and production equipment. Using one and the same system, you can extract material and transport it over long distances within a given production facility. Dustcontrol systems are modular, which means that they are very flexible. They are easy to build up and adapt to accommodate changes or new requirements.

High suction capacity and ease of use

Dustcontrol's other product area comprises mobile dust extractors for industrial and construction usage. These are available in a range of models and sizes for a wealth of different applications. However, all models are distinguished by high suction capacity and ease of use. Good ergonomic design, durability

and plenty of smart details make Dustcontrol machines exceptionally easy to work with. All our mobile units are fitted with very efficient filters, as well as air-pulse filter cleaning systems. When dust is considered hazardous to health, dust extractors must be fitted with HEPA filters. It is not enough to ensure that these HEPA filters are very efficient

– the machine must be designed in such a way as to prevent the spread of dust when the machines are emptied or serviced, or when the filters are replaced.

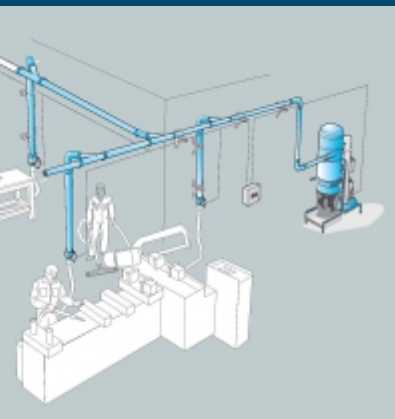

The right accessories ensure the best result

Dustcontrol also has a broad, comprehensive range of accessories.

All products and accessories – from cleaner nozzles and hoses, to pipes, connections, preseparators and suction casings – are designed to be interchangeable. Using original Dustcontrol accessories guarantees that the machine will provide optimal performance.

Higher efficiency and quality with cleaner environment

Products and solutions from Dustcontrol are used in a wide range of industries. Most demand clean and efficient production and high product quality. They also appreciate a healthy working environment. Some solutions are for material transportation or collecting spill to recycle back into the process. Here are a few examples of sectors and customers:

Food Industry

Central vacuum systems, mobile dust extractors and aircleaners for general cleaning and to extract unhealthy dust and particles at for example Absolut Company in Sweden, Kellogg's and Twinings Tea in the UK.

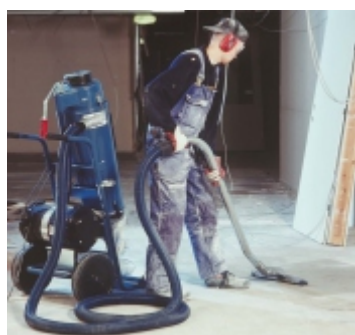

Manufacturing-Workshops

A number of installations for dealing with dust, fumes and fibres for customers such as SKF, ITT Flygt, Sandvik and SAPA.

Automotive Manufacturers

Source extraction workshop installations for Scania in Sweden, MAN Diesel and Volkswagen in Germany, Ford in Great Britain and Germany, Renault in France and Toyota in Canada.

Construction Industry

Mobile construction vacuums for Skanska and NCC and many other, both small and large construction companies worldwide.

Printers

Source extraction fitted in printing presses from MAN Roland and others.

Electronics

Workstations for Nokia in Finland and Ericsson (Flextronics) in Sweden, as well as clean room environments for Siemens in Germany.

Public transport

Installations for cleaning trains for the Polish and Austrian railways and for public transport applications in Canada and Sweden.

Pharmaceuticals

Cleaning and source extraction systems for the Pharmacia, AstraZeneca and other production facilities. Clean room environments for Pfizer, Gödecke, and many others.

Aircraft manufacturers

Installations designed to capture dust and other pollutants at EADS Airbus in Germany and Lockheed Martin in the United States.

Automotive Workshops

Source extraction and cleaning installations in workshops in Sweden, Finland and Great Britain.
